

Development browsers + Code editors

Browsers

All browsers have developer tools. Chrome is best (in my opinion). But it's good to have a look what your site looks like in other browsers. Also, if you want to debug issues on an iPhone, it's handy to Safari for that. Here's a short list:

- [Google Chrome](#)
- [Firefox](#)
- [Opera](#)
- [Internet Explorer](#) (for Windows only)
- [Safari](#) (for Mac only)

Code editors

There are tons of code editors to choose from. Here a few you can have a look at.

- [Sublime Text](#) I ♥ this code editor. Watch [this video](#) to see how to get a license.
- Microsoft's [VS Code](#)
- Github's [Atom](#)
- Panic's [Coda 2](#)
- Adobe [Dreamweaver](#) (in code mode)
- [CodePen](#) is a social and online code editor
- [Brackets](#)

Remember: coders are very opinionated when it comes to code editors. So choose one you're happy to use.
